

Linde Forklift Parts

Linde Material Handling is one of the largest manufacturing businesses in the world specializing in forklifts and warehouse equipment. For over 5 decades, the firm has been raising the bar for driver assistance systems, fleet management, industrial trucks and high performance material flow solutions. Linde has produced a unique set of equipment designed to take care of individual buyer demands.

As one of the world leaders in manufacturing warehouse equipment and forklifts, the business operates in Europe under the Linde and Fenwick brands. Joining the KION Group in 2006, Linde is among one of the leading suppliers for Intralogistics by providing automation solutions. The KION Group is additionally the second largest manufacturer of industrial trucks across the world.

Operating in over one hundred countries around the globe with its' own branches, Linde is widely respected within the industry. There are assembly and production departments in China, Germany, the Czech Republic, France and the USA, along with over 700 service and sales retailers. The company's fleet is really expansive. There are approximately 80 series with roughly 9000 equipment options and up to 20 model variants. Linde builds the fleet and their vehicles specifically customized to their end users desires.

Linde also creates high-performance options for intralogistics with warehouse equipment, diesel and electric forklifts, automation solutions, fleet management software, financing options and driver assistance systems. The firm offers expansive operator certification and forklift services.

There have been great advancements in automation, digital networking and the demand for more specific equipment across a number of industries; contributing factors that are driving technological change within the intralogistics realm. Linde Material Handling strives to help its' end users meet and exceed their material management challenges. Client satisfaction is very important at Linde. In fact, there is no product considered off the shelf. The company only implements technological innovations if they provide its' customers with a sustainable advantage.
