

Fantuzzi Parts

The Fantuzzi Group offers an over abundance of material handling equipment and heavy machinery. The fleet consists of numerous equipment specializing in loading, unloading and transporting goods. The railway freight sector and the port authority utilize a large portion of their equipment.

Initially beginning in the 1960s as a zoo-technical and agricultural equipment manufacturer in the province of Reggio Emilia, Fantuzzi has expanded to become a world leader in the heavy equipment industry. Now a global company, the company gradually expanded after welcoming successful advancements and overcoming a large number of technological challenges. Luciano Fantuzzi is the President and founder of the group. In 1967, the group began making side lift trucks specifically for transporting timber and extended materials such as metal rods that weighed between 3 to 5 tonnes. The firm enjoyed frequent orders and completed sixty units in the 2nd; approximately five times greater than their 1st year sales.

Within a short time, the business grew exponentially. In 1968, a heavy-duty side-loader British model that was capable of lifting up to 32 tonnes inspired Luciano Fantuzzi. He wanted to create something that had more power with a similar style. After finishing this machine and achieving his goal, Luciano began receiving orders from French Railways, Fiat and many others. Nowadays, the Fantuzzi Group Italy has numerous manufacturing plants throughout the world including Italy, Germany and China. The business proudly exports to 162 countries.

Fantuzzi has kindly provided its patented technology with countries all around the globe with the goal of making the material handling, heavy equipment and transportation industries more efficient. Advancements and digital technology are serving to transform the industry.
