The machinery are industrial lifts used to lift materials and equipment. Most usually they are used in production and manufacturing settings. The scissor lift is also referred to as a table lift. This unit is an industrial lift made specifically used at retail and wholesale work places. Often seen in the aisles of big retail stores, the scissor lift is a platform along with wheels. It works similar to a forklift. The scissor lift is an effective mode of moving objects and individuals above ground level.

The name of the lift originates from its unique design, which is used to raise and lower the platform in the air. As the linked, folding supports draw together the platform is rises. The supports work in a scissor-like fashion, propelling the platform upward. At its tallest height, a scissor lift can extend from 6.4 to 18.8 meters in the air which really depends on the kind. An electric or hydraulic motor are utilized in order to propel the platform in the air, moving faster in the middle of the lift and slower at the end.

Since the original designs of the scissor lift was developed during the 1970s, they are still being built based on the same basic designs. Then again, some of the materials used have bee made better as well as there being far better safety implements involved into the designs. New models could travel over the smooth flooring of a warehouse or the uneven ground of a construction site. The unit was designed to help productivity in the numerous retail establishments that were growing larger. Compared to the forklift, the scissor lift is more effective and more portable in retail environment. They are the only industrial platforms which could be retracted and fit into a relatively small storage place.

The modern kinds of the scissor lift can be seen in all production and manufacturing companies.
